

Other Integrations

This article contains information about other software and web services that XTRF can integrate with.

Apart from the software presented in the subsections of the [Integration with Other Systems](#) article, XTRF has also means of integration with the following applications and services:

- SMS (text message) gateways (brokers) integration allow for sending text messages directly from XTRF, either automatically, e.g. as part of a workflow, or manually by users. The SMS broker currently supported is [Cardboardfish](#).
- For the purposes of updating currency exchanges rates, XTRF can connect to the databases of the [European Central Bank](#) and the [Polish National Bank](#).
- XTRF REST API allows third-party software to connect to XTRF Home and Customer Portals in order to modify data.
- XTRF Macros allow to prepare and export data to any kind of text files (including CSV and XML formats) in order to later import them to another software, such as an accounting system.

With help of the [Integration with CAT Tools](#), XTRF allows also for machine translation of files. Depending on the CAT tool used, supported MT engines include but are not limited to Asia Online, Bing, Google Translate, SDL Automated Translation, SDL BeGlobal Community, SmartMATE, and Tauyou.
